Mould variety

Moulds Myerson Special teeth are available in a wide variety of types and forms that make it possible to customise dentures to conform to the personal characteristics and facial features of most patients.

Upper Anterior

Myerson anterior teeth are categorised into 3 mould types:

1. 'A' or Aesthetic Moulds
2. 'Y' or Youthful Moulds
3. 'P' or Prime Moulds

'A' or Aesthetic Moulds

- Slender forms with excellent balance between the ridge lap and bite
- Subtle labial carving and lifelike blending

'Y' or Youthful Moulds

- Similar to A moulds in aesthetic concept except that they have a shorter ridge lap
- Beautiful sculpting with a vigorous youthful look
- Longer more youthful lingual line
- Fewer situations and age related effects than 'P' moulds

'P' or Prime Moulds

- Designed for older patients
- Shorter, less sloping ridge laps to help butting in the ridge in partial and immediate dentures
- Excellent carvings with more pronounced age characteristics, ruggedness and curvature

All Myerson teeth are available in all 16 matching A-D shades plus one "whiter white" (51) bleached shade.
